DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/14/07 has been entered.

Response to Arguments

2. Due to the amendments to claims 1-10, the previous rejections are rendered moot.

3. Applicant's arguments filed 9/14/07 have been fully considered but they are not persuasive. Claim 11 claims the same structure and function as the previously presented prior art of Lyu et al., wherein the controlling parts are fixed to the apparatus, and the panels themselves are interchangeable. Applicant has added the limitation that the control units contain control commands for either machine. This limitation differentiates claims 1-10 from the prior art, because the control units are not fixed to either machine. But this appears to be an error in claim 11, because the control units are fixed and exclusive to each machine and only interchangeable with the control panels, not the machines themselves.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 11-16, 18-19 rejected under 35 U.S.C. 102(e) as being anticipated by Lyu et al. (Lyu).

The applied reference has a common assignee with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Lyu discloses interchangeable control panels 20a and 20 for a washing machine A and a dryer B. Lyu refers the the panels as covers, but in essence are similar, if not identical, to the control panels disclosed by the applicant. Each appliance has its own controlling part consisting of displays, keys, etc. referred to as 22a and 22 and its own controller 12 and 12a thereby reading on claims 2-6, 8, 12-16, 18. The panels are interchangeable with each control part and unit. The panels are on the tops of the machines.

Claim Rejections - 35 USC § 103

6. Claim 17 rejected under 35 U.S.C. 103(a) as being unpatentable over Lyu in view of Broker. Liquid display devices are common and cannot be considered novel. Broker et al. disclose the use of a liquid crystal display screen that is capable of receiving input parameters (col. 2 line 30-31). It would have been obvious at the time of the invention to modify Lyu, and include LCD displays, as they are a known means to receive input parameters.

Allowable Subject Matter

7. Claim 1-10 allowed. The prior art does not teach control units that are capable of operating both the dryer and washing machine. The prior art does teach interchangeable control panels, but the control units themselves are exclusive to each machine. The inclusion of control commands for both machines on each control unit is patentably distinct from the prior art.
